supporting creativity

The imagePROGRAF TX series, including the TX-3200 (36") and TX-4200 (44") models, alongside their MFP Z36 versions, comes with five colours – Matt Black, Black, Cyan, New Magenta, Yellow – and a range of features to accelerate productivity.

YOUR PERFECT PRINTER WILL HAVE:

IMPRESSIVE PRODUCTIVITY

FAST, ACCURATE, AND INTEGRATED SCANNING

SUPPORT YOUR SUSTAINABILITY GOALS

INK REPLACEMENT DURING PRINTING

SOFTWARE SUPPORT FOR SEAMLESS WORKFLOWS

STRENGTHENED SECURITY

ENHANCED EASE OF USE AND MEDIA HANDLING

PROFESSIONAL IMAGE QUALITY

1. IMPRESSIVE PRODUCTIVITY

Whether you're printing architectural blueprints or engineering schematics, don't let your print hardware hold you back. The imagePROGRAF TX series prints at 3.3 ppm/A1, while keeping misprints to a minimum via colour calibration, printhead monitoring, and auto ink ejection adjustment.

The dual roll configuration lets you easily print with different media types and sizes, while the optional stacker enables continuous printing with a capacity of up to 100 A0/A1 CAD drawings.

2. INK REPLACEMENT DURING PRINTING

The imagePROGRAF TX series never skips a beat – with hot swap ink tanks, you can change the ink without pausing the printing process, as some ink is kept in reserve sub-ink to be used automatically as needed. That means using every last drop of ink, preventing downtime, and helping to cut costs.

You can fit the printer with the ink tank best suited for your needs as well, with 160ml, 330ml, or even 700ml options.

3. STRENGTHENED SECURITY

Secure printing means only the right people can access the printer, take prints, and manage the data storage.

That's why the imagePROGRAF TX series is packed with security features to safeguard your sensitive information, including enhanced encrypted communications, secure PIN code printing, an advanced authentication process and secure hard drive erasure.

4. PROFESSIONAL IMAGE QUALITY

CAD drawings and technical schematics need to be easy to read, from brightly lit factory floors to drizzly worksites.

Sharp lines and detailed text are a given – but the imagePROGRAF TX series also uses water-resistant pigment ink for prints that stand up to outdoor use, plus new magenta ink, which adds better red colour reproducibility for vivid, distinct layers in CAD drawings.

5. SOFTWARE SUPPORT FOR SEAMLESS WORKFLOWS

When you print with the imagePROGRAF TX series, you also have our powerful software at your fingertips.

Our free Direct Print Plus job submission tool helps you minimise misprints via the PDF engine and preview window, and PRISMAproduce Tech, used for our colorWAVE and plotWAVE printers, brings together all print options and layouts in one easy-to-use platform, for quick printing using templates and the dynamic print preview.

6. ENHANCED EASE OF USE AND MEDIA HANDLING

With the imagePROGRAF TX series, we designed operability into the core of the printing experience.

From auto media loading and auto detection of media type, to simplified media setting and an intuitive touchscreen interface, it's a printer that puts your workflow first. You can view printer status at a glance too, with transparent ink tank covers and LED indicators for ink levels to reduce downtime.

7. FAST, ACCURATE, AND INTEGRATED SCANNING

If you need highly productive and seamless scanning capability, the MFP models of the imagePROGRAF TX series will deliver.

By using a fully integrated Z36 scanner with advanced SingleSensor technology and the latest SmartWorks software, the printer offers seamless processing with simultaneous printing and scanning, for an improved user experience and workflow.

8. SUPPORT YOUR SUSTAINABILITY GOALS

Support your sustainability goals with the new imagePROGRAF TX series. With an EPEAT Gold* rating for its energy efficiency, the printer also has improved packaging, free from expanded polystyrene (EPS).

*EPEAT Gold registered in the U.S.
